

NCERT Discrete 11.9.1 Q7

EE23BTECH11061 - SWATHI DEEPIKA*

Question: Find the indicated terms in the sequence whose n th terms is $x(n) = 4n - 3$. Find $x(17)$ and $x(24)$.

Solution: In the question, following information is provided:

Symbol	Value	Description
$x(n)$	$4n - 3$	The n th term of the sequence
$x(17)$?	17th term
$x(24)$?	24th term

TABLE I
PARAMETERS

$$x(n) = (4n - 3)u(n).$$

$$x(17) = 4 \times 16 - 3 = 61$$

$$x(24) = 4 \times 23 - 3 = 89$$

$$X(z) = \frac{4z^{-1}}{(1 - z^{-1})^2} - \frac{3}{1 - z^{-1}}$$

The plot between $x(n)$ and n is :
