

NCERT Discrete 11.9.1 Q7

EE23BTECH11061 - SWATHI DEEPIKA*

Question: Find the indicated terms in the sequence whose n th terms is $a(n) = 4n - 3$. Find $a(17)$ and $a(24)$.

Solution: In the question, following information is provided:

Symbol	Value	Description
$x(n)$	$4n - 3$	The n th term of the sequence
$x(17)$?	17th term
$x(24)$?	24th term

TABLE I
PARAMETERS

$$x(n) = (4n - 3)u(n). \quad (1)$$

$$x(17) = 4 \times 16 - 3 = 61 \quad (2)$$

$$x(24) = 4 \times 23 - 3 = 89 \quad (3)$$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] \cdot z^{-n} \quad (4)$$

From (??) we get,

$$X(z) = 4 \frac{z^{-1}}{(1 - z^{-1})^2} - 3 \frac{1}{1 - z^{-1}} \quad |z| > 1 \quad (5)$$

The plot between $x(n)$ and n is :

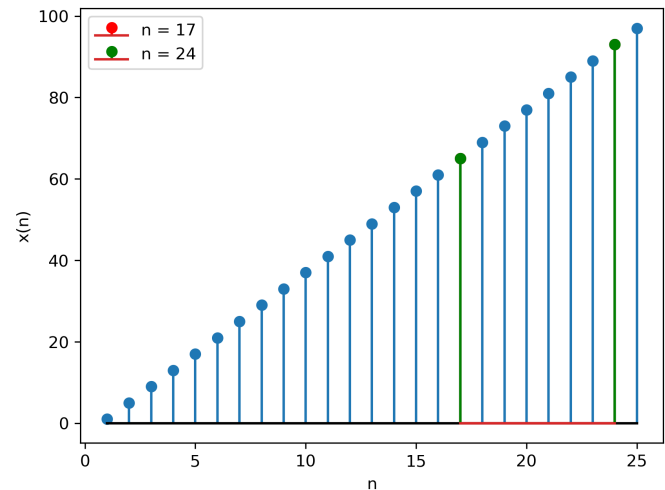

Fig. 1. $x(n)$ vs n
